Transition of SnowPro Associate Certification to the Snowflake University Platform Skills Badge FAQs

Q: Why is Snowflake transitioning to a new Snowflake University Platform Skills badge from the SnowPro Associate Certification?

A: Our goal is to ensure the effort you put into a credential matches the value you get back. We have found that the previous model created unnecessary friction—like managing vouchers and scheduling with third parties— to prove foundational knowledge. By moving to a Skills Badge, we meet you where you already are (in Snowflake University). The “SnowPro” is reserved for high-stakes, proctored professional exams.

Q: What are the primary benefits of this transition for me?

A: We are focused on three improvements to your experience:

- **Removing Friction:** You no longer have to deal with the administrative burden of voucher management or third-party registrations.
- **Brand Protection:** We are ensuring that your future "SnowPro" credentials remain synonymous with high professional standards.
- **Path Clarity:** We’ve created a logical roadmap for your career, moving from "Learning" (Skills Badge) to "Professional Expertise" (SnowPro Core).

Q: Is there a cost change for me?

A: The Snowflake Platform Skills course and end of course assessment is free. By removing third-party proctoring fees, we have made it more affordable than ever for you to start your Snowflake journey.

Q: When does this change go live?

A: The official transition occurs on **May 5, 2026**. On this date, Associate certification voucher codes will be disabled, and the new **Snowflake University Platform Assessment** will be available.

Q: What if I currently hold an un-used SnowPro Associate voucher?

A: These vouchers expire on **May 5, 2026**. After this date, you will no longer need a voucher, you can simply head to Snowflake University, finish the final Snowflake University Platform assessment, and receive your Snowflake University Platform Skills Badge instantly.

Q: What should I do if I finished the course but do not see my badge?

A: First, double-check that you have completed the Snowflake University Platform Assessment within the LMS. Your badge is triggered automatically once you pass. If your badge does not appear via Accredible within 24 hours, please submit a case at **community.snowflake.com/s/educational-services**.

Q: Is the new Snowflake University Skills Badge the same as the previous SnowPro Associate Certification?

A: The new Snowflake University Skills Badge validates the same foundational knowledge gained in the Platform course, but this new badge does not expire. It is now an educational skills badge issued directly through Snowflake University, removing the need for third-party exam registration. The previous SnowPro Associate was an unproctored certification that did expire. Snowflake has removed any unproctored exams from the certification program.

Q: I already hold the SnowPro Associate Certification. Is it still valid?

A: Yes. Your current certification remains valid until its original expiration date. Going forward, the “SnowPro” designation will be reserved for proctored exams. We encourage all current Associate holders to pursue the SnowPro Core Certification as their next professional milestone. You can also earn the Snowflake University Platform Assessment within the LMS and that badge does not expire.

Q: How do I share my new Snowflake University Platform Skills Badge on LinkedIn?

A: Once you complete your end of course assessment in Snowflake University, you will receive a digital credential via Accredible. Click the “Share” button directly from your Accredible profile to add it to your LinkedIn “Licenses & Certifications” section.
